

**Table (1):** Comparison between patients activity in liver biopsy and fibroscan elasticity score

| <b>All patients<br/>(n=78)</b> | <b>Mild activity<br/>(A1)<br/>(n=35)</b> | <b>Moderate to severe activity (A2-A3)<br/>(n=43)</b> | <b>T</b> | <b>P</b> |
|--------------------------------|--|---|----------|----------|
| Range (KPa)                    | 3.4-10.2                                 | 3.8-38  |          |          |
| Mean $\pm$ SD                  | 5.94 $\pm$ 1.98                          | 11.93 $\pm$ 8.18                                      | -2.878   | 0.005*   |
| Median                         | 5.57                                     | 8.3   |          |          |

Significant (P<0.05).
